## **DETAILED ACTION**

### ***Claim Objections***

Claim 12 is objected to because of the following informalities:

In line 1, it is necessary to change "claim 1" to --claim 2--, since "the faceplate" is not claimed in claim 1

. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "the latch".

There is insufficient antecedent basis for this limitation in the claim. For purposes of examination it was assumed that the latch is a configuration of the resilient member claimed in claim 1

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1- 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Mano et al.

Art Unit: 2833

With regard to claims 1-3, 14, 15, 17, Mano et al (US 6,712,649) disclose (Fig. 11, 12) a spring clip connector assembly comprising:

a base product – faceplate (101) with a plurality of openings, and

a spring clip connector including a housing (115) having a front wall with an opening (111) for receiving a wire therethrough, a movable tab (105) located in the housing, and a conductor secured to the housing and having a contact (117) positioned to engage a wire inserted through the opening in the front wall, and a spring (107, 113) between the housing and the tab,

wherein the housing includes a resilient member and the base product includes a mounting surface, the resilient member movable between a first position that permits insertion of the housing through the opening of the faceplate and a second position that engages the at least one mounting surface and blocks removal of the housing from the opening of the faceplate, and

wherein the tab is movable between a closed position such that a portion of the tab is adjacent to the contact to secure a wire inserted through the opening in the front wall against the contact and an open position such that the portion is farther away from the contact than in the closed position to release the wire, the spring biasing the tab toward the closed position.

With regard to claim 4, Mano et al disclose (Fig. 11, 12) that the base product (101) has a bottom mounting surface and a top mounting surface.

With regard to claims 5, 12, Mano et al disclose the latch is a cantilever latch (Fig. 11, the latch penetrating 101).

With regard to claims 6-9, 11, Mano et al disclose (Fig. 11, 12) the front circular opening (111) being centrally-disposed .

With regard to claims 10, 16 Mano et al disclose (Fig. 2) the contact (33) partially blocks the opening in the front wall .

With regard to claim 13, Mano et al disclose (Fig. 1) the front wall has two openings (35).

With regard to claim 18, Mano et al disclose the structure which is assembled and operated using steps claimed.
